

# A night in Margaritaville

## Stacy Hehn's Benefit

If you know Stacy you know she is a cheerful, hardworking and loving young lady. You would never know of her lifelong health challenges that began at the tender age of 15 months. It was discovered at that time she had a malignant kidney tumor causing her to go on chemo, radiation treatment and dialysis. After a year she was able to receive a kidney donated by her dad. As the years went by Stacy required two more kidney transplants as well as many other surgeries and serious health scares. In spite of the health issues in her life Stacy has always kept a positive, cheerful outlook on life and been an inspiration to many people. This past April Stacy was diagnosed with stage 4 liver cancer.
